25X1 DATE PREPARED 27 April 1954 1. The following air activity and aircraft were observed at Heubrandenburg at rield between 12 and 27 March 1954: 17 March. Between 9 a.m. and 4 p.m., there was air activity by twin-engine aircraft, sore of which flew at altitudes of 200 to 300 meters below the clouds, and others flew in or above the alouds. Up to 10 aircraft were simultaneously aloft. There was a 9/10 overcast. 18 March. Between 9 a.m. and 7 p.m., individual and formation flights were made. During the individual flying, the Li-2s would circle once widely over the fleid and, during formation flying, the aircraft flew in elements of twose and flights of threes circling in the vicinity of the fleid. The flight altitudes were between 150 and 300 meters, while the sky was 7/10 overcast. 19 March. Throughout the day, formation flying was mostly practiced with up to 10 aircraft teing eloft at the same time; at night, individual flights were made ouring the late afternoon, and individual. flights were made during the late afternoon, and individual. flights were conducted after nightfell. There were no clouds. 24 March. Petween 1 p.m. and 6 p.m., there was individual flying by Li-2s which individually took off at intervals of fout 30 minutes and flow in vertous directions. The first lending was made about 1 hour after the first take-off. 25 March. Shout 9 a.m., 18 11-2s parked in two rows opposite each other and along the southern taxiway, were counted at the field. The weather was overcast with elser visitility. No air activity was conducted. 27 March. Shout 9 a.m., 18 11-2s observed between 12 and 27 larch were apparently conducted by very experienced pilots as the flights were made with great accuracy and skill.				an animal executivities of the	рок (1 м.), я такжоў нашнаў штому укладнаў такжай праст
25X1 DATE PREPARED 27 April 1954 1. The following sir activity and aircraft were observed at Newbrandenburg at rield between 12 and 27 March 1954: 17 March. Between 9 a.m. and 4 p.m., there was air activity by twin-ongine electrorit, sore of which flew at altitudes of 200 to 300 meters below the clouds, and others flew in or above the alouds. Up to 10 sicraft were simultaneously alore. There was a 910 overcast. 18 March. Between 9 a.m. and 7 p.m., individual and formation flights were made. During the individual flying, the Li-2s would circle once widely over the field and, during formation flying, the aircraft flew in elements of twose and flights of threes circling in the vicinity of the field. The flight altitudes were between 150 and 300 meters, while the sky was 7/10 overcast. 19 March. Throughout the day, formation flying was mostly practiced with up to 10 aircraft keing eloft at the same time; at night, individual flights were made during the late afternoon, and individual flights were made during the late afternoon, and individual flights were conducted after nightfill. There were no clouds. 22 March. Petween 1 p.m. and 6 p.m., there was individual flying by Li-2s which individually took off at intervals of fout 30 minutes and flaw in vertous directions. The first lending was made about 1 hour after the first take-off. 25 March. Shout 9 a.m., 18 Li-2s perked in two rows opposite each other and along the southern taxisay, were counted at the field. The weather was overcast with clear visitility. No air activity was conducted. 27 March. Shoutly before nightfell, 18 Li-2s were again observed along the southern taxisay. The formation flights by Li-2s observed between 12 and 27 larch were apparently conducted by very experienced pilots as the flights were made with great accuracy and skill.
